BUTYL TUBES

FEATURES

- ✓ Superior Air Retention
- ✓ Less Prone to Oxidisation
- ✓ Higher Heat Durability
- ✓ Longer Shelf Life

MOTO GOLD OFFERS HIGH QUALITY BUTYL TUBES COVERING EXTENSIVE RANGE OF SIZES FOR VARYING APPLICATION REQUIREMENTS.

ALSO AVAILABLE AT **WWW.MCSONLINE.COM.AU**

**TYRE PATCHES
TYRE LEVERS
TYRE REPAIR KITS
REPLACEMENT VALVES & CAPS
AXLE TOOLS
PLUS MUCH MORE...**

**CHECK AIR PRESSURE BEFORE RIDING
ALWAYS FOLLOW MANUFACTURERS RECOMMENDATIONS**

True Blue PUNCTURE GOO

'prevention is better than the cure'

How TrueBlue Puncture GOO Works:

Centrifugal forces create an even coat of GOO on the inner wall of the tyre or tube. When the tyre is punctured, the escaping air drags the GOO into the affected area. Fibres in the solution entwine to create a clot, reducing the volume of escaping air in minor punctures. The GOO that does escape, dries upon exposure to the atmosphere to form a flexible but lasting seal. The properties of the tyre are not changed by this action and the cured plug reduces damage to the belting and plies from outside contaminants. In severe instances that can not be sealed, the operator will enjoy an increased safety factor by the prolonged time the operator has to bring the affected machine under control. TrueBlue Puncture GOO can be used as a preventative reducing the inconvenience of delays and downtime, or as a minor puncture fix after the event has happened. TrueBlue GOO's ability to maintain tyre pressure does not relieve the operator from visual tyre checks prior to each trip. We strongly advise that regular tyre checks are carried out by a knowledgeable and competent tyre professional on a regular basis.

Sealing Capabilities:

TrueBlue Puncture GOO has the ability to temporarily seal quite large intrusions maintaining vehicle mobility. The size of the intrusion will depend on a number of factors, ie. thickness of the rubber at the intrusion, its location and the amount of GOO available. TrueBlue GOO has been successful in sealing sidewall punctures, bead leaks and rim problems - a failing with most other tyre sealants. TrueBlue GOO's viscosity (an attribute from the Research and Development team) is the key factor. Sidewall problems may require more puncture GOO as the sealant must cavitate over the affected area at low revolutions, all or alternatively, be removed and rolled or bounced manually to facilitate the GOO to the affected area. TrueBlue GOO has been accredited with sealing 12-16mm intrusions in farm vehicles and 22mm in truck tyres! TrueBlue Puncture GOO's viscosity permits the GOO to cavitate, saturating the sidewalls, bead and rim at low revolutions. This coats the entire inner cavity eliminating air migration due to porosity and poor bead seating. At higher speed, centrifugal force moves the GOO to the inner periphery of the tread area in a uniform and balanced layer. Repeated or severe puncturing will change the GOO's constancy, adversely affecting TrueBlue GOO's ability to maintain these properties due to the loss in moisture level.

Suggested Quantities per Tyre	Min.	Front	Rear
Bicycles	60ml	125	125
Lawn Mowers (Small)	125ml	200	300
ATV (Four Wheelers)	125ml	200	300
Off Road Motorcycles	125ml	250	250
Bob Cat	250ml	1L	1L
Cruiser Type Tyres	125ml	250	300
Truck Steer	300ml	500-750	
Super Singles	500ml		1.5L
Trailers - Caravans	125ml	250	250
Delivery Vans	125ml	200	300
Small Cars	100ml	125	200
Large Cars	125ml	200	250
Sprint Cars	200ml		300
Tractor	1L	1.5L	
Fork Lift (Large)	750ml	1.5L	1L
